SessionGuardian for the Legal Industry

- ## SessionGuardian Web

  Perfect for secure, web-only document reviews, SessionGuardian Web combines rapid, safe access to essential documents with robust security, making it a cost-effective and efficient choice for specialized tasks – now available on iOS.

- ## SessionGuardian VDI

  Our configurable security controls can be applied to your VDI environment where native document processing is required. All major VDI providers are supported (Azure, Citrix, AWS, VMWare), putting security at your fingertips.

  SessionGuardian Web and SessionGuardian VDI are monitored via a single administration console - simplifying system setup and ongoing project management.

- ## Key Use Cases

  Preventing unauthorized access to client data and IP is essential, and SessionGuardian can help. We enable you to limit access to your data by extending physical security controls to the hybrid working environment. This allows only authorized personnel using approved and healthy devices from vetted locations. With SessionGuardian's technology, you can secure:

  - Matter-specific Collaboration

  - Third-Party / BPO access to data

  - Document Review

  - Source Code Review

  - eDiscovery
